

New Jersey Department of Environmental Protection **Compliance Assistance at Marinas**

Top Ten Most Frequently Encountered Issues

1. Stormwater Permitting

Triggers are most commonly Fueling Activities (of any kind in an AST or UST) and/or Mechanical/Engine Repair Activities. Waste Water issues are due to Boat Maintenance like Sanding, Scraping and Power Washing. Required to control the discharge into waterways...tarps, berms, other waste water collection system

2. Air Permitting

Triggers are dispensing of gasoline or other volatile fuel product in an AST or UST \geq 2000 gallons.

3. Solid Waste/Recycling

- Providing containers for both trash and recyclables
- Providing lids for containers
- Containers are clearly marked

4. Spill Prevention/Emergency Planning

- Having a Spill Response Plan in place
- Posting of emergency phone numbers (Coast Guard and DEP Hotline)
- Having absorbent booms and pads stored near waterway

5. Used Batteries Storage and Disposal

- Stored under cover or inside
- Labeling them as "Used Batteries"

6. Waste Oil Storage and Disposal

- Container or tank is labeled as Waste Oil
- Container is located in a secure place

7. Hazardous Waste Storage and Disposal

- Not labeling containers
- Many not required to have a hazardous waste generator ID# due to small quantities, but must still label containers

8. Used Tires Storage and Disposal

- Storing large numbers of tires uncovered where rainwater can collect attracting mosquitos for breeding ground – W. Nile Virus

9. Anti-Freeze Disposal

- Not properly disposing of anti-freeze –must be containerized and recycled

10. Underground Storage Tanks

- No upgrade of mandatory spill, overfill and corrosion protection (Dec. 1988)
- No verifiable leak detection method
- No registration of tanks or expired registration only
